

Public Lands Consulting – Nevada

Most of the land in Nevada is public land. Consequently, many of Telesto Nevada Inc's client projects involve working closely with the two major public land agencies in Nevada: the Forest Service (FS) and the Bureau of Land Management (BLM). Some of the projects that Telesto is currently involved with on public lands include:

Mining:

- Gryphon Gold Corporation's – Borealis Mine – FS
- Isabella/ Pearl LLC – Isabella Mine - BLM
- Taylor Western Resources LLC – Victoria Mine - BLM
- Ireland Inc.'s – Columbus Salt Marsh – BLM

Most of this work involves land planning, infrastructure development, and permitting proposed exploration and facility development activities on public lands. Issues that are addressed in the process include:

- Availability of electrical power or natural gas
- Inventory of existing access, rights-of-ways, etc.
- Air Quality – visual impacts
- Water – erosion and sedimentation, water quality
- Impacts on Cultural and Biological Resources
- Public Safety
- Land Use – post mining activities, reclamation and re-use of infrastructure

An excellent understanding of the land use regulations of these two public land agencies has been developed over the years along with a keen understanding of geospatial infrastructure distribution.

More importantly what has been developed is an exceptional insight in to the potential symbiosis between present day activities and the potential of future development that can capitalize on the infrastructure associated with the present land use activities when they cease to occur.
